

# Requirement Framing

## Core Problem

Employees submit support requests through email and chat, causing delays, duplicate requests, and poor tracking.

## Intended Outcome

Create a simple internal helpdesk system to organize requests, assign ownership, and improve visibility.

## Scope (V1)

- Submit Ticket
- View Ticket
- Assign Ticket
- Update Status
- Dashboard

## Non-Goals

- Mobile App
- AI Chatbot
- Live Chat
- Knowledge Base

## Unresolved Questions

- Required ticket fields?
- Ticket workflow?
- Manager permissions?

## Major Risks

- Low user adoption
- Unclear requirements
- Scope creep
