

AI Coding Workflow

Workflow

1. Define the engineering task.
2. Prepare a clear prompt with the required context.
3. Review the proposed implementation approach.
4. Approve the implementation plan.
5. Generate the code.
6. Review the generated code.
7. Execute unit tests and manual testing.
8. Accept, revise, or reject the AI-generated solution.

Result

AI assists throughout development, but engineers remain responsible for code quality, testing, and final approval.
