

Debugging & Verification

Scenario

Employees are unable to create support tickets.

Investigation

- Review application logs.
- Reproduce the issue.
- Test the Ticket Creation API.
- Verify database connectivity.
- Check server-side validation.

Evidence

- Error logs
- API responses
- Database query results
- Unit and integration test results

Decision

AI-generated suggestions are evaluated using collected evidence. If verification or testing fails, the implementation is revised before being merged.
